Register by March 19:

www.wcdpa.com

For information, contact:

Mimi Thomas-Brooker
724-837-5271, ext. 211

Hosted by

In partnership with

Guest Speaker:

Glen Abrams, AICP, Manager, Strategic Policy and Coordination
Philadelphia Water Department, Office of Watersheds

Elected officials will learn a variety of cost-effective practical solutions to meet the challenges of:

- controlling stormwater
- reducing incidents of flooding
- reducing combined sewer overflows (CSOs)
- meeting MS4 requirements
- complying with Act 167 requirements

Participants will receive a handbook of typical best management practices (BMP's) to share with your engineer and staff.

Representatives from the partnering organizations will be on site to discuss how we can assist your municipality in the techniques for and benefits of improved stormwater control.

Funding for this program was provided by the PA Department of Environmental Protection.

Glen Abrams serves as Manager for Strategic Policy and Coordination for the Philadelphia Water Department's Office of Watersheds, where he leads efforts to link PWD's programs and policies with those of other City departments, state and federal agencies, and nonprofit partners. In addition, his team reviews policies, codes, and programmatic functions and facilitates changes to ensure successful implementation of Philadelphia's innovative Combined Sewer Overflow Long-Term Control Plan, "Green City, Clean Waters."
